### Fabcon Food Systems Appoints New Mechanical Design Engineer

8 September 2018 - ONLINE

Fabcon Food Systems, which manufactures, supplies and installs handling and processing equipment for the food industry, has appointed Clayton Moore as the company's new mechanical design engineer.

Moore joins the 23-strong Fabcon team where he will play an important role in the design, improvements and manufacturing of Fabcon's frying, weighing, seasoning and packaging machinery.

Moore, 41, has almost 20 years' experience working with PDM systems and maintaining quality standards, including ISO9001.

He will work closely with fellow design engineer, Luke Cossey, a key member of the engineering department who recently achieved a First Class Honours Degree in Mechanical Engineering. The 23 year-old's final thesis on heat recovery systems was the culmination of four years study across all aspects of mechanical engineering - choosing heat recovery in frying systems as it is a key development area for Fabcon.

Led by Engineering Director Andrew Peek, both are set to be integral to the development of Fabcon's systems as it wins more orders across the world.

Trevor Howard, managing director of UK-based Fabcon Food Systems, said: "To support that growth and our ambitions, we need first-rate engineers who understand the sector and our customers' requirements. Clayton ticks those boxes and comes in to work closely with Luke, a rising star and one of the industry's most promising young engineers. Both are innovative technical designers, part of a new generation. He has only been with us a short time but Clayton is already making a great impact with our customers and internally too. He is a wonderful addition to our team."

Moore added: "It is a rare opportunity to get to work with so many different systems and customers so I am delighted to be part of the team here at Fabcon. I want to help push through not only new designs, but working closely with Andrew, Luke and others to help improve our current offering."

Formed in 2015, Fabcon Food Systems manufacture, supply and install handling systems for customers in Europe, the Middle East, Africa and Australia.
